

MicrobeTV, Inc.

Science education for everyone

The Incubator

By Vincent Racaniello

The Incubator is the name of the combined offices of MicrobeTV, Inc. and Parasites Without Borders, LLC. Located in the heart of midtown New York City, it is where all science programs are recorded. Just two blocks from Penn Station, The Incubator is easy for visiting scientists to stop in for a quick interview when in town.

As the COVID-19 pandemic winds down and everyone is returning to their lives, our goal is to remind them that science is important for our health and well-being. Our science programs will continue to present the information needed to navigate questions about vaccines, disease outbreaks, public health measures, and more.

We will keep you informed about our progress with this monthly newsletter.

We depend on your support to achieve our goals. Please visit microbe.tv/contribute. MicrobeTV, Inc is a 501(c)3 charity.

WHAT'S NEW

INSIDE THE INCUBATOR

A look inside the NYC recording studio that powers MicrobeTV and Parasites Without Borders.

OUR SCIENCE PROGRAMS

An overview of MicrobeTV podcasts, videos, and lectures.

ARE YOU READY TO LEARN?

We have many ideas for new programming to bring you life sciences knowledge.

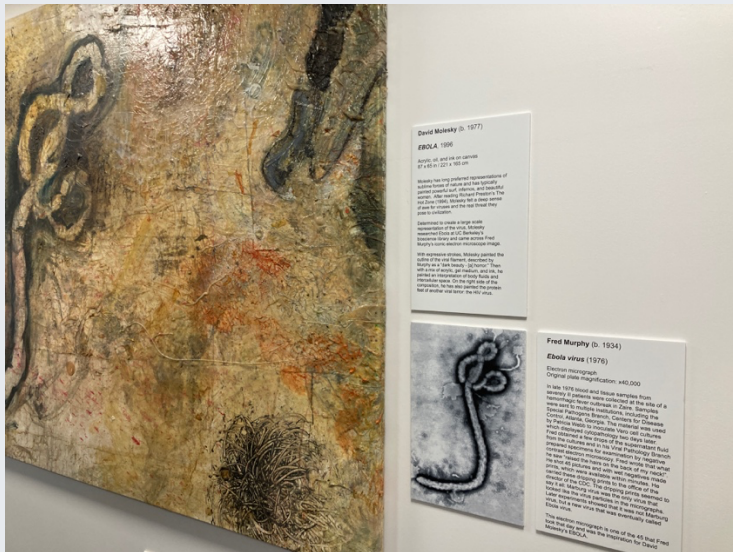

Take a look inside

By Vincent Racaniello

In early 2021 Vincent and Daniel began searching for office space in New York City. They settled on a property located at 352 Seventh Avenue. After a brief renovation, furniture and recording equipment was acquired and the space was turned into a combined office and recording studio.

Podcasts and videos are recorded and produced in a separate space that can be easily reconfigured for single or multiple-person productions. Within the studio is also an intimate seating area for one-one discussions with our in-studio guests.

A second part of The Incubator is a large office space, where the painting *Ebola* has been installed. There is a large table for conferences, a separate library area with bookshelves filled with reading material covering all aspects of the life sciences, chairs and a lamp for reading. A small kitchen and office complete this area.

Our Science Programs

By Hana Berhe

MicrobeTV is an independent podcast network for people who are interested in the life sciences. Here are some of our programs. You can find all of them at microbe.tv

This Week in Virology

A podcast about viruses - the kind that make you sick

Infectious Disease Puscast

A review of infectious disease literature

This Week in Parasitism

A podcast about the tiny creatures that live on and in us

Immune

A podcast about the body's defenders against disease

This Week in Neuroscience

A podcast about the nervous system

This Week in Evolution

A podcast on the biology behind what makes us tick

This Week in Microbiology

A podcast that explores unseen life on earth

Q&A with A&V

A Livestream for listeners to ask virologists questions about COVID-19 or other viral diseases

Virology Lectures

Vincent's Columbia University undergraduate virology course, revised each year.

Virology Live

A live-streamed version of Vincent's Columbia University virology course.

Parasitology Lectures

A course in basic parasitology, taught by Dickson Despommier and Daniel Griffin.

Are you ready to learn?

We have many new ideas for new ways to educate everyone about science. Coming in the fall of 2022 is 'Viruses Live', a livestreamed course on YouTube that explores individual viruses, including influenza virus, SARS-CoV-2, and HIV-1. We have recently launched the Infectious Disease Puscast with Daniel Griffin and Sara Dong, a bi-monthly review of the infectious disease literature and are planning a public health podcast with a well-known science writer. Have a suggestion for a science program? Send it to vincent@microbe.tv.
